

**The European Land Robot Trial M-ELROB 2014, Warsaw, Poland
Invitation to exhibit on the accompanying display**

Dear Sir or Madam

You are cordially invited to exhibit at the display of the 8th European Land Robot Trials (M-ELROB 2014) in Warsaw. The ELROB offers you the unique possibility to present your products and equipment.

The military ELROB (23 - 27 June 2014), which takes place for the fifth time now, enables you to get a glance at the latest R&D in the area of unmanned outdoor/off-road ground systems. The scenarios have been developed in closest co-operation with the military users and reflect the up-to-date requirements of the forces. This event offers the fantastic opportunity to mingle with the international experts from the user community, the industry and the R&D sector.

As in the former events the M-ELROB consists of various trials (day and night), an exhibition (static display) and live demonstrations (dynamic display). The participation in the different trials as well as in the exhibition (dynamic or static) is of course all optional. Nevertheless, the focus of the exhibition is on the presentation of robotic systems and/or related components. You can expect international expert staff and press attendance.

The exhibition will take place on the first three days of the M-ELROB:

23-25 June 2014

We offer you a) an exhibition booth and/or b) the possibility to participate in the dynamic display (on Monday) where you can actively present your material and interact with the audience. The dynamic display is not part of any official trial or ranking! The competition itself is reserved for registered trial participants only.

The fee for the static display at M-ELROB 2014 will depend on the requested size of the exhibition booth, but includes power and security services. Further equipment (desk, chairs, catering etc.) can be hired on additional charges. Participation in the dynamic display is free of charge. Please contact elrob@wat.edu.pl for details.

Additionally we offer you the exclusive opportunity to advertise your products and equipment in the special issue of the M-ELROB 2014 Programme. This programme is the main source of information for all registered guests and spectators at the ELROB. It contains a short description of each team as well as a map of the premises and a floor plan of the exhibition with a list of participating companies. This information can be amplified with your distinguished advert. Please contact elrob@wat.edu.pl for details.

For further information or questions regarding participation in the trials we would like to refer to our web page: www.elrob.org and the email contact: elrob@elrob.org

We are looking forward to your participation in the M-ELROB 2014!

Kind regards
PhD. Eng. Marian Łopatka
